

Tiny Globe City — asset catalogue

624 assets across 16 categories, 33 of them already modelled in the game.

Style reference: docs/art/mossbite-style-reference.png

How to read a card

Each card shows the same asset twice. Left: the shape treated the way the reference sheet treats it — flat bands of warm colour and a dark edge. Right: the placeholder standing in for it in the game today. Where the game already has the model, the right-hand render is that actual model, not an approximation.

Where the list comes from

Compiled from knowledge of Prague's streets — its districts, street furniture, transport and building types — not from a live Google Street View session. Nothing here was sampled from imagery at build time; treat each entry's note as a description to check against a real street view before modelling.

One world unit is one metre. The player is 1.5 m tall, so every size below is in metres at that scale.
